ABSTRACT:

... wild-type. The mutant was engulfed more rapidly by human neutrophils
in the presence of serum opsonins, survived poorly in fresh whole
human blood and was less virulent in a mouse model of sepsis. The
protective mechanism seems to stem from an accelerated degradation of the
serum opsonin C3b.

ABSTRACT:

... but a lower risk of bacteremia-related death. Here, the role played by anti-staphylococcal antibodies was studied. Methods. Serum samples from 15 persistent carriers and 19 noncarriers were analyzed for immunoglobulin (Ig) G, IgA, and IgM binding to 19 *S. aureus* antigens, by means of Luminescence technology. Nasal secretions and serum samples obtained after 6 months were also analyzed. Results. Median serum IgG levels were significantly higher in persistent carriers than in noncarriers for toxic shock syndrome...

... clumping factor (Clf) A and B. The in vitro neutralizing capacity of anti-TSST-1 antibodies was correlated with the MFI value and was higher in persistent carriers (90.6% vs. 70.6% [image]). Antibody levels were stable over time and correlated with levels in nasal secretions (for IgG [image]; for IgA, [image]). Conclusions. Antibodies to TSST-1 have a neutralizing capacity, and median levels of antibodies to TSST-1, SEA, ClfA, and ClfB are higher in persistent carriers than in noncarriers. These antibodies might be associated with the differences in the risk and outcome of *S. aureus* infections...

Interaction of Human Complement with Sbi, a Staphylococcal
Immunoglobulin-binding Protein: INDICATIONS OF A NOVEL MECHANISM OF
COMPLEMENT EVASION BY STAPHYLOCOCCUS AUREUS

...Karen L; O Seaghdha, Magnus N; Lango, Lea; Bernado, Pau; Bagby,
Stefan; Svergun, Dmitri I; Foster, Timothy J; Isenman, David E;
van den Elsen, Jean MH

ABSTRACT:

Staphylococcal immunoglobulin-binding protein, Sbi, is a
436-residue protein produced by many strains of Staphylococcus aureus...
...region of Sbi (Sbi-E) is an elongated molecule consisting of four
globular domains, two immunoglobulin-binding domains (I and II) and
two novel domains (III and IV). We further show...

...via contacts involving both the C3dg fragment and the C3a anaphylatoxin
domain. Preincubation of human serum with either Sbi-E or Sbi-III-IV
is inhibitory to all complement pathways, whereas domain IV specifically
inhibits the alternative pathway. Monitoring C3 activation in serum
incubated with Sbi fragments reveals that Sbi-E and Sbi-III-IV both

activate the...

Roles for fibrinogen, immunoglobulin and complement in platelet activation promoted by Staphylococcus aureus clumping factor A

Loughran, Anthony; Fitzgerald, J Ross; Brennan, Marian P; Higgins, Judy; Downer, Robert; Cox, Dermot; Foster, Timothy J

ABSTRACT:

... required. Using platelets that were purified from plasma, the requirement for both bound fibrinogen and immunoglobulin was demonstrated. The immunoglobulin G (IgG) requirement is consistent with the potent inhibition of platelet activation by a monoclonal antibody specific for the platelet Fc gamma RIla receptor. Furthermore the IgG must contain antibodies specific for the C1qA domain. A model is proposed whereby bacterial cells armed with...

 Foster, Timothy J

ABSTRACT:

... rapid platelet aggregation by either a fibrinogen- or a fibronectin-dependent process which also requires antibodies specific to each protein. Slower aggregation has been seen in other systems where specific fibrinogen binding ligands are absent and platelet aggregation is mediated by complement and specific antibodies. Bacteria expressing C1b aggregate platelets with a longer lag time than C1a or FnBPA and...

...requirements for platelet aggregation were investigated using gel-filtered platelets. Fibrinogen and specific anti-C1b antibodies were found to be sufficient to allow platelet aggregation mediated by the wild-type C1b...

...C1b Q235A caused platelet aggregation in a complement-dependent manner which required specific anti-C1b antibodies.

DESCRIPTORS: Antibodies; C1b protein; Endocarditis; Fibrinogen; Fibronectin; Platelet aggregation; protein A; Lactococcus lactis; Staphylococcus aureus

...to fibrinogen, and N123 caused some reduction in bacterial attachment, whereas N12 was essentially inactive. Antibodies raised against the central N2 domain of the A-region were the most effective at inhibiting bacterial adhesion to immobilized fibrinogen, although anti-N3 or anti-N1 antibodies also caused some reduction in C1fB-mediated adherence to fibrinogen.

... AUTHOR ABSTRACT: wild-type. The mutant was engulfed more rapidly by
 human neutrophils in the presence of serum opsonins, survived poorly
 in fresh whole human blood and was less virulent in a mouse model of
 sepsis. The protective mechanism seems to stem from an accelerated
 degradation of the serum opsonin C3b.

A monoclonal antibody enhances ligand binding of fibronectin MSCRAMM
(adhesin) from *Streptococcus dysgalactiae*

Speziale, P; Joh, D; Visai, L; Bozzini, S; House-Pompeo, K; Lindberg,
M Hook, M

ABSTRACT:

A monoclonal antibody 3A10, generated from a mouse immunized with
the *Streptococcus dysgalactiae* fibronectin (Fn) binding protein FnBA...

10615383anti.txt

...recognize the antigen by itself, and Fn was required for the immunological interaction between the antibody and the epitope. This induction effect of Fn was shown in both Western blot and...

...Streptococcus pyogenes Fn binding M5GRAMM but not the corresponding motifs in two related adhesins from Staphylococcus aureus and S. dysgalactiae. Furthermore, 3A10 stimulated Fn binding by S. pyogenes cells. These results...

...a defined structure rich in beta sheet and expressing a ligand-induced binding site for antibodies such as 3A10.

DESCRIP TORS: monoclonal antibodies; ligands; antigens;
Streptococcus dysgalactiae

Structural Organization of the Fibrinogen-binding Region of the Clumping Factor B MSCRAMM of *Staphylococcus aureus*

...Samuel, Walsh, Evelyn J.; Deivanayagam, Champion C. S.; Narayana, Stanham V. L.; Foster, Timothy J.; Hook, Magnus

The clumping factor B (ClfB) of *Staphylococcus aureus* is a surface protein that binds to fibrinogen (N Eidhin, D., Perkins, S., Francois...

...to fibrinogen, and N123 caused some reduction in bacterial attachment, whereas N12 was essentially inactive. Antibodies raised against the central N2 domain of the A-region were the most effective at inhibiting bacterial adhesion to immobilized fibrinogen, although anti-N3 or anti-N1 antibodies also caused some reduction in ClfB-mediated adherence to fibrinogen.

Identification and preliminary characterization of cell-wall-anchored proteins of *Staphylococcus epidermidis*. (Author Abstract)
 ... Hook, Magnus

AUTHOR ABSTRACT: *Staphylococcus epidermidis* is a ubiquitous human skin commensal that has emerged as a major cause of...

...compared to strains isolated from healthy skin. Patients recovering from *S. epidermidis* infections had higher antibody titres against some Sepsis proteins, implying that these proteins are expressed during human infection. Western...
